

Description

The Rain Garden mixture addresses water conservation in the diversity it possesses. With excellent deep rooting abilities and lower maintenance requirements of all the species this mix will help to filter collected rain water for ground water replenishment. Use this mix in larger areas or smaller, more confined areas. This mixture has excellent color variation from the wildflowers as well as the beautiful mature texture and colors of the native grasses and “grass-like” species. Use this mixture in areas of excessive water run-off or retention basins sites for natural water infiltration.
