

RESCUE +

TALL FESCUE / BLUEGRASS MIX

Description

Rescue Plus is a mix of top quality Kentucky bluegrass varieties specifically formulated to provide superior drought tolerance and low maintenance performance, while the Summer tall fescue offers support for quick establishment of the bluegrasses. Rescue Plus is mixed at a 80/20 base by seed count. **Rescue Plus** is ideal for the home owner who may not have supplemental irrigation. The varieties have a wide range of disease resistance and a low growth habit.

Contains:

- 93% Summer Turf Type Tall Fescue.
- 7% Jackpot Kentucky Bluegrass

Main Uses:

Athletic Fields, Parks, Golf Course Roughs, Home Lawns, Commons Areas, Rural Airport Runways.

Seeding Rate:

- New Seeding (bare ground): 10 LBS per 1,000 SQ FT
- Over-Seeding (into existing): 5 LBS per 1,000 SQ FT
- Over-Seeding (heavy use): 8 LBS per 1,000 SQ FT

Seeding Dates:

- March-May
- August- October
- December-February (dormant seeding)

Days to Germinate:

- Fescues- 7-10 Days
- Bluegrass- 10-21 Days

Characteristics

- Color:** Dark Green
- Density:** Excellent
- Shade Tolerance:** Very Good
- Drought Tolerance:** Excellent
- Wear Tolerance:** Excellent
- Mowing Height:** Down to 1.5" Cut
- Leaf Texture:** Medium to Fine
- Rate of Establishment:** Excellent

CERTIFIED SEED

Rescue Plus

93-7 Tall Fescue-Bluegrass Mix

Lot# RP-19

Interagency Certified

Variety & Kind	Purity	Germ.	Origin	Lot Number
Jackpot Kentucky Bluegrass	7.00%	90%	WA	TBD
Summer Turf Type Tall Fescue	93.00%	90%	OR	TBD
Total Pure: 100.00% Crop: 0.00% Inert: 0.00% Weeds: 0.00% AMS: 127				
Net Weight: 50.0 Lbs. 22.68 Kgs Test Date: 012-31-2019 Excess Noxious Weeds: None

General Seeding Guidelines

I. SEEDING DATES

April 15 to June 15

August 10 to October 15

November 15 to February 15

II. SITE PREPARATION FOR BAREGROUND SEEDING

- i. Conduct a soil test, per acre, to determine any needed soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Eliminate existing vegetation
- iv. Spray with a non-selective herbicide
- v. Remove any dead vegetation
- vi. Add soil amendments. Adjust PH.
- vii. Till soil to a 4-6 inch depth
- viii. Remove any large debris
- ix. Pulverize and lightly roll soil
- x. Apply 1 lb of Phosphorous (P) (2.27 lbs P_2O_5) / 1000 ft² to soil surface

III. SITE PREPARATION FOR INTERSEEDING/OVERSEEDING

- i. Conduct one soil test, per acre, to determine any need soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Remove any debris that may inhibit seeding
- iv. Mow area to be seeded if existing vegetation is higher than 3-4 inches

IV. SEEDING METHODS

Seeding Method is base on the slope and soil at site. Use broadcast, drop, slit or drill seeding methods where erosion is not a concern.

- i. Seed should be planted .125 to .25 inches below soil surface
- ii. Plant two directions putting 1/2 of seed down each direction
- iii. Gently roll or rake seeded area to ensure good soil to seed contact
- iii. If inter-seeding into existing vegetation use a slicer/inter-seeder that cuts into existing vegetation and places the seed into the soil at an optimum depth of 1/4 to 1/2 inch and achieves good soil to seed contact
- iv. If broadcast seeding into existing vegetation drag a harrow or chain link fence over seeded area to ensure seed to soil contact.

Hydro seed steep slopes or areas where erosion is a concern..

- i. Broadcast 1/2 of the seed before hydro-seed mixture is applied
- ii. Place the other 1/2 in the hydro seed mixture

V. WATERING REQUIREMENTS

- i. Water to field capacity immediately after seeding
- ii. The first three weeks after seeding keep top 1.t inches of soil moist
- iii. Weeks four through six after seeding water 3-4 times per week
- iv. After six weeks water when grass begins to show drought stress

VI. FERTILIZATION AND MOWING

- i. Fertilize seeded area once for the first two months with .5 lbs of N / 1000ft² after seeding
- ii. Mow when the grass is one inch longer than desired height. Do not remove more than 1/3 of grass blade.
