

Snapback RR

Back RR TURF FESCUE BLEND

Description

Snapback RR (Real Rhizomes) is a new generation of turf type tall fescues which produce rhizomes that shoot new growth. The mixture of No-Net and Summer Turf Type Tall Fescues in **Snapback RR Fescue Blend** are the first true rhizomatous turf type tall fescues that have been truly tested in sod farm production. Truly tested means there were no bluegrasses mixed with the tall fescue. Rhizomes will start to form in the first six weeks. Snapback RR will require less over-seeding and requires less water requirements.

Contains:

- 70% No Net Turf Type Tall Fescue
- 30% Summer Turf type Tall Fescue

Main Uses:

Athletic Fields, Home Lawns, Sod Farms, Commercial Sites

Seeding Rate:

- New Seeding (bare ground): 6 LBS per 1,000 SQ FT
- Over-Seeding (into existing): 4 LBS per 1,000 SQ FT
- Over-Seeding (heavy use): 8 LBS per 1,000 SQ FT

Seeding Dates:

- March-May
- August- October
- December-February (Dormant Seeding)

Days to Germinate:

Fescues- 7-10 Days

Characteristics

- Color: Dark Green
- Density: Excellent
- Shade Tolerance: Very Good
- Drought Tolerance: Excellent
- Wear Tolerance: Excellent
- Mowing Height: Down to 3/4" Cut
- Leaf Texture: Fine

CERTIFIED SEED

Snap Back RR Fescue Blend Lot # SBFB-19

Variety & Kind	Purity	Germ.	Origin	Lot Number
(No Net TM) Tall Fescue	70.00%	90%	OR	TBD
Summer Turf Type Tall Fescue	30.00%	90%	OR	TBD

Total Pure: 100.00% Crop: 0.00% Inert: 0.00% Weeds: 0.00% AMS: 127
 Net Weight: 50.0 Lbs. 22.68 Kgs Sell By: 12-31-2019 Excess Noxious Weeds: None

General Seeding Guidelines

I. SEEDING DATES

April 15 to June 15

August 10 to October 15

November 15 to February 15

II. SITE PREPARATION FOR BAREGROUND SEEDING

- i. Conduct a soil test, per acre, to determine any needed soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Eliminate existing vegetation
- iv. Spray with a non-selective herbicide
- v. Remove any dead vegetation
- vi. Add soil amendments. Adjust PH.
- vii. Till soil to a 4-6 inch depth
- viii. Remove any large debris
- ix. Pulverize and lightly roll soil
- x. Apply 1 lb of Phosphorous (P) (2.27 lbs P₂O₅) / 1000 ft² to soil surface

III. SITE PREPARATION FOR INTERSEEDING/OVERSEEDING

- i. Conduct one soil test, per acre, to determine any need soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Remove any debris that may inhibit seeding
- iv. Mow area to be seeded if existing vegetation is higher than 3-4 inches

IV. SEEDING METHODS

Seeding Method is base on the slope and soil at site. Use broadcast, drop, slit or drill seeding methods where erosion is not a concern.

- i. Seed should be planted .125 to .25 inches below soil surface
- ii. Plant two directions putting 1/2 of seed down each direction
- iii. Gently roll or rake seeded area to ensure good soil to seed contact
- iii. If inter-seeding into existing vegetation use a slicer/inter-seeder that cuts into existing vegetation and places the seed into the soil at an optimum depth of 1/4 to 1/2 inch and achieves good soil to seed contact
- iv. If broadcast seeding into existing vegetation drag a harrow or chain link fence over seeded area to ensure seed to soil contact.

Hydro seed steep slopes or areas where erosion is a concern..

- i. Broadcast 1/2 of the seed before hydro-seed mixture is applied
- ii. Place the other 1/2 in the hydro seed mixture

V. WATERING REQUIREMENTS

- i. Water to field capacity immediately after seeding
- ii. The first three weeks after seeding keep top 1.t inches of soil moist
- iii. Weeks four through six after seeding water 3-4 times per week
- iv. After six weeks water when grass begins to show drought stress

VI. FERTILIZATION AND MOWING

- i. Fertilize seeded area once for the first two months with .5 lbs of N / 1000ft² after seeding
- ii. Mow when the grass is one inch longer than desired height. Do not remove more than 1/3 of grass blade.
