SUPER FAST PERENNIAL RYE BLEND

Description

Super Fast Perennial Ryegrass Blend is a competitively priced rye blend that will blow your hair back with fast germination, great color and density and the power to fight back disease such as Gray Leaf Spot. **Super Fast Perennial Ryegrass Blend** is a great choice for golf courses, sports fields, home lawns and other areas where heavy foot traffic is a on-going concern. With germination and establishment times in less than 5-6 days, you will have the luxury of knowing your area to be seeded will be green in no time.

Contains:

Infusion and Premium Perennial Ryegrass (varieties subject to change)

Applications for Use:

Athletic Fields, Parks, Golf Course Fairways, Home Lawns, Driving Ranges, High Traffic Areas, Nurse Crop and Over-seeding

Seeding Rates:

New Seeding (bare ground): 7 LBS per 1,000 SQ FT

Over-Seeding (into existing): 4 LBS per 1,000 SQ FT

Over-Seeding (heavy use): 10 LBS per 1,000 SQ FT

Seeding Dates:

March-May

August- October

December-February (dormant seeding)

Days to Germination:

Perennial Ryegrass- 4-7 Days

Characteristics

Color: Dark Green

Density: Excellent

Shade Tolerance: Fair

Drought Tolerance: Good

Wear Tolerance: Excellent

Mowing Height: Down to 1/2 inch

Leaf Texture: Fine

Spring Greenup: Very Good

Gray Leaf Spot Resistance: Very Good

CERTIFIED SEED

Super Fast Rye Blend

Lot # SFRB-19

Variety & Kind	Purity	Germ.	Origin	Lot Number
Infusion Perennial Ryegrass	50.0%	90%	OR	TBD
Premium Perennial Ryegrass	50.0%	90%	OR	TBD
Total Pure: 100.0% Crop: 0.00% Inert: 0.00% Weeds: 0.00% AMS: 127				
Net Weight: 50.0 Lbs 22.68 Kgs Sell By: 12-31-2019 Excess Noxious Weeds: None

General Seeding Guidelines

I. SEEDING DATES

April 15 to June 15

August 10 to October 15

November 15 to February 15

II. SITE PREPARATION FOR BAREGROUND SEEDING

- i. Conduct a soil test, per acre, to determine any needed soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Eliminate existing vegetation
- iv. Spray with a non-selective herbicide
- v. Remove any dead vegetation
- vi. Add soil amendments. Adjust PH.
- vii. Till soil to a 4-6 inch depth
- viii. Remove any large debris
- ix. Pulverize and lightly roll soil
- x. Apply 1 lb of Phosphorous (P) (2.27 lbs P₂O₅) / 1000 ft² to soil surface

III. SITE PREPARATION FOR INTERSEEDING/OVERSEEDING

- i. Conduct one soil test, per acre, to determine any need soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Remove any debris that may inhibit seeding
- iv. Mow area to be seeded if existing vegetation is higher than 3-4 inches

IV. SEEDING METHODS

Seeding Method is base on the slope and soil at site. Use broadcast, drop, slit or drill seeding methods where erosion is not a concern.

- i. Seed should be planted .125 to .25 inches below soil surface
- ii. Plant two directions putting 1/2 of seed down each direction
- iii. Gently roll or rake seeded area to ensure good soil to seed contact
- iii. If inter-seeding into existing vegetation use a slicer/inter-seeder that cuts into existing vegetation and places the seed into the soil at an optimum depth of 1/4 to 1/2 inch and achieves good soil to seed contact
- iv. If broadcast seeding into existing vegetation drag a harrow or chain link fence over seeded area to ensure seed to soil contact.

Hydro seed steep slopes or areas where erosion is a concern..

- i. Broadcast 1/2 of the seed before hydro-seed mixture is applied
- ii. Place the other 1/2 in the hydro seed mixture

V. WATERING REQUIREMENTS

- i. Water to field capacity immediately after seeding
- ii. The first three weeks after seeding keep top 1.t inches of soil moist
- iii. Weeks four through six after seeding water 3-4 times per week
- iv. After six weeks water when grass begins to show drought stress

VI. FERTILIZATION AND MOWING

- i. Fertilize seeded area once for the first two months with .5 lbs of N / 1000ft² after seeding
- ii. Mow when the grass is one inch longer than desired height. Do not remove more than 1/3 of grass blade.
