

Contains:

Chewings Fine Fescue, Creeping Red Fine Fescue, Hard Fine Fescue and Sheep Fine Fescue

Applications for Use:

Golf Course Roughs, Home Lawns, Parks, Cemeteries

Seeding Rates:

New Seeding (bare ground): 4-6LBS per 1,000 SQ FT
Over-Seeding (into existing): 2-3 LBS per 1,000 SQ FT

Seeding Dates:

March-May
August- October
December-February (dormant seeding)

Days to Germinate:

Fine Fescue– 10-14 Days

Characteristics

Color: Very Good

Density: Good

Shade Tolerance: Excellent

Drought Tolerance: Very Good

Wear Tolerance: Poor

Mowing Height: Down to 2 inch cut

Leaf Texture: Fine

Rate of Establishment: Good

Description

Super Shade is a versatile blend of fine fescues that will perform well in shaded areas as well as full sun applications. This blend thrives under lower maintenance practices which include, reduced mowing, fertilizer, water and fungicide/insecticide requirements. Super Shade is not traffic tolerant however, and should not be used in high traffic areas.

CERTIFIED SEED

Super Shade Fine Fescue Blend Lot # SSM-19-25#

Kind And Variety	Purity	Germ.	Origin	Lot Number
Sheeps Fine Fescue	25.00%	90%	OR	TBD
Hard-Beacon Fine Fescue	25.00%	90%	OR	TBD
Chewings Fine Fescue	25.00%	90%	OR	TBD
Boreal Creeping Red Fescue	25.00%	90%	CAN	TBD
Total Purity : 100.00% Crop: 0.00% Inert: 0.00% Weeds: 0.00% AMS:12/

General Seeding Guidelines

I. SEEDING DATES

April 15 to June 15

August 10 to October 15

November 15 to February 15

II. SITE PREPARATION FOR BAREGROUND SEEDING

- i. Conduct a soil test, per acre, to determine any needed soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Eliminate existing vegetation
- iv. Spray with a non-selective herbicide
- v. Remove any dead vegetation
- vi. Add soil amendments. Adjust PH.
- vii. Till soil to a 4-6 inch depth
- viii. Remove any large debris
- ix. Pulverize and lightly roll soil
- x. Apply 1 lb of Phosphorous (P) (2.27 lbs P₂O₅) / 1000 ft² to soil surface

III. SITE PREPARATION FOR INTERSEEDING/OVERSEEDING

- i. Conduct one soil test, per acre, to determine any need soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Remove any debris that may inhibit seeding
- iv. Mow area to be seeded if existing vegetation is higher than 3-4 inches

IV. SEEDING METHODS

Seeding Method is base on the slope and soil at site. Use broadcast, drop, slit or drill seeding methods where erosion is not a concern.

- i. Seed should be planted .125 to .25 inches below soil surface
- ii. Plant two directions putting 1/2 of seed down each direction
- iii. Gently roll or rake seeded area to ensure good soil to seed contact
- iii. If inter-seeding into existing vegetation use a slicer/inter-seeder that cuts into existing vegetation and places the seed into the soil at an optimum depth of 1/4 to 1/2 inch and achieves good soil to seed contact
- iv. If broadcast seeding into existing vegetation drag a harrow or chain link fence over seeded area to ensure seed to soil contact.

Hydro seed steep slopes or areas where erosion is a concern..

- i. Broadcast 1/2 of the seed before hydro-seed mixture is applied
- ii. Place the other 1/2 in the hydro seed mixture

V. WATERING REQUIREMENTS

- i. Water to field capacity immediately after seeding
- ii. The first three weeks after seeding keep top 1.t inches of soil moist
- iii. Weeks four through six after seeding water 3-4 times per week
- iv. After six weeks water when grass begins to show drought stress

VI. FERTILIZATION AND MOWING

- i. Fertilize seeded area once for the first two months with .5 lbs of N / 1000ft² after seeding
- ii. Mow when the grass is one inch longer than desired height. Do not remove more than 1/3 of grass blade.
